Certifications

Foundations of Project Management
Certificate of Achievement in recognition of successful completion of Bachelor's program IC Design specialist
Agile Project Management

Honors-Awards

RA State Educational Award 1st Best Bachelor IT field

Vahe Babasyan

Unity Tech Lead / Head of Development | Unity, C#, CI/CD, AI-assisted development (Claude Code, Codex) | Mobile gaming
Yerevan, Yerevan, Armenia

Summary

Unity Tech Lead and Head of Development with 10 years in mobile games. I lead the development team at Gora Games, a real-money skill-gaming platform and casual titles on Android and iOS, and I stay hands-on in the client code.What I doArchitecture. I design Unity codebases meant to last: clear layer boundaries, dependency injection, MVVM with reactive data flow, Addressables for content, configuration that degrades safely when the network does not cooperate. The point is that several products and a growing team can share one codebase without blocking each other.Mobile platform. Build size, startup time and memory on real devices, including low-end Android. The SDK layer that every mobile game carries: ad mediation, attribution, analytics, consent, push, anti-fraud signals. Store publishing on both platforms.Team and delivery. CI/CD with tests as a release gate, a planning-first process where every task has a written plan before implementation, and since 2026 AI agents (Claude Code, Codex) as part of everyday work: implementation from the plan, automated review of pull requests, internal tooling that connects Jira, Figma and the Unity Editor.BackgroundGora Games, 2024 to now: Unity Tech Lead and Head of Development. Next Epic, 2017 to 2023: from junior developer to CTO, 40+ shipped casual, merge, match-3 and hypercasual titles.Stack: Unity, C#, VContainer, UniRx, UniTask, Addressables, IL2CPP, AppLovin MAX, Firebase, AppsFlyer, Tenjin, Flagsmith, GitHub Actions, Claude Code, Codex, MCP.

Experience

Gora Games

Unity Tech Lead / Head of Development
August 2024 - Present (2 years 3 months)
Yerevan, Armenia

Real-money skill-gaming platform and casual titles on Android and iOS. Lead a cross-functional team (Unity, backend, QA); own the client architecture and the release pipeline.

• Designed the client architecture: layered codebase with explicit boundaries between framework, feature systems and app modes; dependency injection, MVVM, reactive data flow; Addressables as the content pipeline; remote configuration with safe local fallbacks.
• Built the multi-product build system so that several titles ship from one codebase with their own identity, SDK set and content.
• Own mobile platform quality: build size, startup time and memory on real devices, including low-end Android; profiling and budgets as part of the release process.
• Own the SDK layer: ad mediation (AppLovin MAX), attribution and analytics (AppsFlyer, Tenjin, Firebase), consent, push, anti-fraud signals.
• Set up CI/CD on self-hosted runners with tests as a release gate and automatic publishing to Google Play, TestFlight and Firebase App Distribution.
• Run a planning-first process: every task has a written plan before implementation. Since 2026 Claude Code and Codex are part of daily work, with automated review of pull requests and internal tooling connecting Jira, Figma and the Unity Editor.

Tech: Unity, C#, VContainer, UniRx, UniTask, Addressables, IL2CPP, AppLovin MAX, Firebase, AppsFlyer, Tenjin, Flagsmith, GitHub Actions, Claude Code, Codex, MCP

Next Epic
6 years 1 month

Senior Unity Developer, Team Lead, CTO
March 2021 - December 2023 (2 years 10 months)
Yerevan, Yerevan, Armenia

Mobile studio, casual and merge games on Android and iOS (Hotel Project: Merge Game and other titles). Promoted from Team Lead to CTO; responsible for architecture, LiveOps infrastructure and the engineering team.

• Designed the shared game architecture used across the studio's titles: data-driven content on ScriptableObjects, state machines for game flow, dependency injection for testability.

• Built the LiveOps foundation: Firebase Analytics, Remote Config and A/B testing, Cloud Messaging, Auth and Realtime Database; weekly events and seasonal content on top of it.
• Owned monetisation integration: IAP and ad mediation, with the analytics to evaluate both.
• Integrated and maintained the third-party SDK layer (ad networks, analytics, attribution).
• Grew and mentored the development team; introduced career tracks and regular reviews.

Tech: Unity, C#, Firebase, ad mediation, ScriptableObjects, state machines, DI

Senior Unity Developer, Team Lead
March 2020 - February 2021 (1 year)
Yerevan, Armenia

Led a match-3 title from concept to launch with a small cross-functional team; the game reached 1M+ downloads with a 4.5-star rating. Also shipped Merge Gnomes Vs Monster in the same period.

• Owned the technical side end to end: architecture, release planning, monthly release cadence.
• Performance on low-end devices: profiling with Unity Profiler, particle and VFX budgets, dynamic resolution, sprite atlasing and batching to hold a stable 60 FPS on 2 GB RAM phones.
• Set performance budgets for assets together with the art team.

Tech: Unity, C#, Unity Profiler, particle systems, dynamic resolution, sprite atlasing

Middle Unity Developer
July 2018 - February 2020 (1 year 8 months)
Yerevan, Yerevan, Armenia

Hypercasual and idle games, codebase consolidation.

• Shipped 15+ hypercasual and idle titles with 3M+ combined downloads in two-week prototyping cycles, including Hair Cut Idle, Food Truck Idle, Joy Center Tycoon, Famous Factory Tycoon and Cats Tower.
• Merged four separate game projects into one codebase while keeping each game's mechanics intact.
• Built reusable UI and in-game messaging components adopted across the studio's projects; added push notifications.

Tech: Unity, C#, push notifications, rapid prototyping

Junior Unity Developer
December 2017 - June 2018 (7 months)
Yerevan, Armenia

Founding team member. Gameplay features, UI and core loops on the studio's first titles (Leo's Journey); helped set up coding standards and the Git workflow.

Tech: Unity, C#, Git

Technology & Science Dynamics / TSD
1 year 6 months

Middle Unity Developer, Team Lead
June 2017 - December 2017 (7 months)
Yerevan, Yerevan, Armenia

Games division of a technology company whose main business was hardware. Led the Unity team of three developers; three games shipped on schedule (Carrot Thief among them). Turned design concepts into technical specifications, introduced code review, mentored junior developers.

Tech: Unity, C#

Intern → Junior Unity Developer
July 2016 - May 2017 (11 months)
Yerevan, Armenia

Started as an intern in the games division of a technology company and moved to junior developer within the first months. Gameplay features, UI and performance profiling for mobile targets on Viking Sail and Color Pop; shared code modules picked up by later projects.

Tech: Unity, C#, Git

Junior Unity Developer
August 2016 - August 2016 (1 month)
Yerevan, Armenia

Gained initial exposure to Unity development, assisting in basic tasks and learning the ropes.

Intern Unity Developer
July 2016 - July 2016 (1 month)

Yerevan, Armenia

Completed intensive Unity development internship, launching professional game development career.

• Learned Unity Editor, C# scripting fundamentals, and game development lifecycle
• Built first playable prototypes demonstrating core gameplay mechanics
• Demonstrated aptitude leading to immediate conversion to Junior Developer

Tech: Unity, C#, Game Development Fundamentals

Education

European University of Armenia

Bachelor's degree, Information Technology, Microelectronic Circuits and Systems of Communication Means · (2014 - 2018)
